**We know times are hard,** and high energy costs pose a challenge for our customers and the entire country. Fuel prices can swing up and down, but if you use less fuel, you always come out ahead.

**And that's where we come in.** Please consider us your partner in the energy savings battle. While we make money delivering fuel, we really build our business by taking care of our customers. We have some great options that can cut your fuel bills by 30% or more. We are experts at installing the most fuel-efficient heating technology. And we can steer you away from choices that may seem to make sense on the surface but have flaws underneath.

## ***Did you know?***

Using a **fireplace** to supplement your primary heating system can suck more money from your home than what you save on heat.

**Space heaters** are notorious for causing carbon monoxide issues in the home and should be used very carefully.

Lowering your **thermostat** by five degrees for eight hours a day can save you 5% on your fuel bills. If you spend \$3,000 a year to heat your home, that's a \$150 savings.

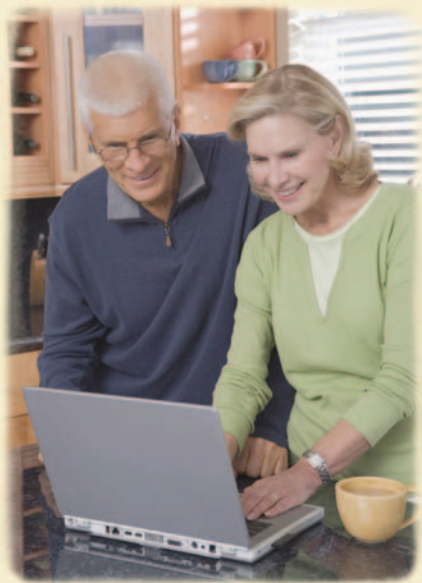

There's new **water heater** technology that can be a blessing or overkill. It depends on how much hot water you use and when, and on the kind of system you have. We can help you choose appropriately.

Although **AFUE** (Annual Fuel Utilization Efficiency) is a useful measurement of fuel efficiency, it doesn't tell the whole story. Some of the highest efficiency equipment can be the most temperamental. And AFUE can be misleading when evaluating boilers.

# Get started on your own energy independence

If you'd like to explore smart ways to reduce your fuel bills permanently, call us now. We'd be delighted to help you buy less fuel from us because we know that's the best way we can ensure customer loyalty over the long run.
